Noto dalla risposta "200 OK" che è andata a buon fine.

The image shows two side-by-side screenshots. The left screenshot is of the Burp Suite interface, with the 'Proxy' tab selected in the top menu. The 'Intercept' tab is active in the main panel, showing buttons for 'Forward', 'Drop', 'Intercept is on', 'Action', and 'Open browser'. The right screenshot is of the Damn Vulnerable Web Application (DVWA) homepage. The browser address bar shows '127.0.0.1/DVWA/index.php'. The page has a dark header with the DVWA logo. A left sidebar contains a list of modules: Home, Instructions, Setup / Reset DB, Brute Force, Command Injection, CSRF, File Inclusion, File Upload, Insecure CAPTCHA, SQL Injection, SQL Injection (Blind), Weak Session IDs, XSS (DOM), XSS (Reflected), XSS (Stored), CSP Bypass, JavaScript, Authorisation Bypass, and Open HTTP Redirect. The main content area has a heading 'Welcome to Damn Vulnerable Web Application!' followed by a paragraph about DVWA's purpose. Below this is a section titled 'General Instructions' with more text. A 'WARNING!' section follows, advising users not to upload DVWA to public servers. At the bottom, there is a 'Disclaimer' section.

Provo a fare lo stesso facendo una richiesta di login con utenza e password sbagliati:
